

A simple 10 minute routine per week
for sparkling spa water and unparalleled experience!

Maintenance calendar for your spa

All the products recommended in this calendar help prevent premature wear and tear of your spa components.

Week	Spa Opening	Weekly Maintenance (on a 3 month period)				Spa Draining (every 3 months)
		1	2	3	4	
Adjust the following parameters: pH: 7.2 - 7.8 Chlorine (Dichloro, Lithium) or Bromine: 3 - 5 ppm	 Step 1					
Have water analyzed by your retailer to adjust the following parameters: Total Alkalinity: 100 - 120 ppm Calcium Hardness: 150 - 200 ppm	 Step 2					
Non-Chlorinated Shock Treatment	 Step 3					
Clarifier (premeasured tablets or liquid)	 Step 4					
Scale Control	 Step 5					
Fragranced Water Softener	 Step 6					
Piping Cleaner						
Spa Cartridge Filter Cleaner						

- For required quantities, read the Directions for Use on the label of each product mentioned in this calendar.
- During weekly maintenance (Weeks 1 to 4), it is recommended to add one product at a time. The order in which the products are added is not important.

1. It is important to adjust and maintain the parameters for pH and chlorine (dichloro or lithium) or bromine at the appropriate values at all times. Add required chlorine or bromine on a daily basis or as needed. Adjust the pH weekly.
2. Have your spa water analyzed regularly by your retailer to adjust and maintain the following parameters: total alkalinity and calcium hardness.
3. Every week, add a **Non-Chlorinated Shock Treatment** for spa to eliminate chlorine odours, clarify and oxidize your water. Bathing is possible immediately after treatment.
4. The **Clarifier (in premeasured tablets or liquid)**, when used on a weekly basis, removes suspended solids and makes water sparkle. The clarifier in a premeasured tablet is clearly more efficient and easier to use than the liquid clarifier.
5. **Scale Control** prevents scale build-up and corrosion in your spa's water heater and plumbing.
6. The **Fragranced Water Softener**, also known as **Velvet-Up, Comfort** or **Comfort Sensation** is essential to increase bathing comfort.
7. Before draining the spa, don't forget the **Piping Cleaner** to degrease and clean spa plumbing. You must remove cartridge before using this product.
8. Once you have removed the cartridge, you can clean it with the **Spa Cartridge Filter Cleaner** to dislodge and dissolve accumulated dirt and body oils in your spa cartridge filter. The cartridge filter must be cleaned once a month.
9. When it's time to clean your spa, specialized products are available, such as **Spa Cover Cleaner, Acrylic Cleaner** and **Acrylic Protector**. Contact your specialized retailer for more information.

Note: This calendar is valid all year round.
